

BASKETBALL SIMULATION

1. Concept

Basketball simulation is text by text video game. play by play game that based on current and past data sets, ex average points, rebounds, assists, steals.

The game responsibility is to analyze current season stats and past stats and create a prediction model of an outcome.

example, who is likely to win 02 TMAC/SHAQ Lakers Vs Kobe, Magic.

analyze past stats and currents and generate a prediction model.

02 LAKERS VS 98 BULLS. WHO would win.

2. Introduction.

Game starts on website, user must sign up or login.

Game Intro, Login, Main Menu, Windows (Sub Menus) Settings.

Intro -> Login/ Sign up.

Main Menu -> Fantasy Draft, Season Draft, One on One, Black top -> Players Bio, Multiplayer, Settings.

Windows (sub Menus)

Fantasy Draft:

User has a large draft pool from all eras, create their team, assign them to conference and location (all 50 US major cities). This is User vs computer. Single user, against 31 other basketball teams. Draft is based on NBA draft class.

Window must have a search bar, search only NBA players active or retired or waived.

Pick 12 players.

Once draft is complete, start game, start season, sim at normal NBA pace or speed up simulation.

User can select coaches active or retired.

Season draft:

New window, draft for current season, with active NBA players including incoming draft class for that season.

user can search or pick from generated list.

Create a team, assign location and conference.

User select active coach.

One on One:

User picks player and computer picks players.

simulate pick up game to 21 points.

Blacktop:

Same as One on One, but pick 3 or 5 max to compete against computer. Game up till 21, user can select any number, but max is 21.

Players Bio:

Get API from Basketball reference site and list a wiki of each player.

Multiplayer:

Under construction.

Settings:

Set sim, level of competition (easy, hard, pro, all star, Legacy), has reset draft, delete profile, delete account, logout, clear game and start over.
